Rebasoft

Cyber resilience
Use case

Datasheet

What's the difference between cyber security and cyber resilience?

The two terms are often confused.

Cyber security is the methods and processes of protecting electronic data.

Cyber resilience is the ability to withstand or quickly recover from cyber incidents

Cyber security would help you **prevent** an incident, cyber resilience helps **reduce the impact** of incidents.

More organisations are taking cyber resilience seriously

Cyber attacks have gone from a possibility to a given. Cyber security is now a risk register item for senior management. Organisations are looking to build a forward-looking strategy for preventing cyber attacks.

You can't 100% guarantee preventing a cyber security incident. Any good strategy plans for failure. But building an incident response plan which is continuously tested and re-iterated is not so easy.

Organisations face staff shortages, IT teams are too busy "putting out fires" to implement strategy or to continuously monitor for threats. Most security programs do not provide the real-time information that is essential for fast incident detection anyway. And these security programs are isolated with poor integrations with each other, meaning they require lots of manual work to stitch together. And they are only getting more expensive.

These are the problems we hear:

- **Lack of real-time visibility** leads to slow threat detection

- **Paying for expensive software** for a complex "patchwork of programs"

- **Jumping between programs**, wasting time on manual tasks that should be automated

- **Poor integration of systems** leads to slow response times

Rebasoft can help

Rebasoft provides behaviour monitoring and network access control functionality so you can detect and respond to threats, on top of our cyber security functions.

- **Real-time data** means you can detect and respond to threats faster

- **A single deployment** collecting and consolidating information means you can save time from doing it manually

- **Integration into asset management** means you don't need to waste hours tracking down systems that need security remediation

- **Lightweight**—collecting information effectively and automatically reduces the load on IT systems

- **Fewer systems and automation** helps reduce complexity and workload on busy IT teams

- **Automation** helps eliminate manual tasks and reduces human error

So with Rebasoft, you can cut costs and take the load off your IT team, freeing them up to focus on a forward strategy and threat detection.

How you can boost cyber resilience with Rebasoft in 5 steps

Improve your security and your ability to detect and respond to attacks

1. Discover

- Discover all IT assets on your network in real-time
- Find all home workers though MDM's like Intune

2. Classify

- Automatically classify devices to create a detailed asset inventory
- Set criticality to prioritise important assets

5. Defend

- Implement an automated network access control policy to quarantine suspicious devices
- Identify threats by continuously monitoring for unusual network traffic
- Report on effectiveness

3. Assess

- Continuously asses misconfigurations and non-compliant devices
- Remediate misconfigurations

4. Monitor

- Continuously monitor for vulnerabilities
- Send emails to users with easy one-click-fixes for automatic patching
- Manually patch vulnerabilities that aren't handled automatically

But that's just the start

Using the asset discovery system as a base, Rebasoft provides the functionalities of multiple cyber security programs like:

- Asset management
- Secure configuration
- Vulnerability management

So with Rebasoft. you can cover the same ground with less solutions. So, you can save money and reduce complexity, because it's all seamlessly integrated.

So why not find out more by booking a live demo with an expert?

Try it now

There's nothing like seeing it in action. After all, you wouldn't buy a car without test driving it.

About us

We at Rebasoft are committed to delivering a robust cyber security solution that addresses genuine business needs. We are not interested in a "silver bullet" approach. We believe that multiple functionalities from one platform and real-time data are essential for keeping up with today's cyber threat landscape. We believe this approach is the future of cyber security and we aim to be the pioneers. We are proudly a UK based company. Visit us at www.rebasoft.net
