Vulnerability management
Use case

Datasheet

Eliminate your biggest source of risk

Most breaches come from known vulnerabilities that weren't patched in time. Clearly there's a problem with how vulnerability management is done.

Vulnerability management solutions suffer from poor integration with asset management systems. And traditional asset management systems are scan based, which often leads to missed devices. Simply put, if you can't see a device, you can't see it's vulnerabilities.

If you want to drill-down into a device to see what software it has installed, it's configuration settings, it's users and it's vulnerabilities, typically this requires jumping between a dozen isolated solutions. What should be a simple task becomes a wild goose chase.

Also, vulnerability management solutions give too many repeated vulnerabilities. IT teams are handed a spreadsheet with thousands of line-items of vulnerabilities and are told "go and fix it", requiring lots of manual device hunting.

> *"Most breaches come from known vulnerabilities that weren't patched in time."*
> ────────

These are the problems we hear:

- **Spending too much time** manually resolving vulnerabilities

- **Wasting time** importing and exporting data between isolated programs

- **"Hurry up and wait"** as scan results take weeks

- **7000 line-item spreadsheets** with repeats and false positives

Rebasoft

Rebasoft can help

Rebasoft continuously checks for vulnerabilities in your systems:

- Uses machine learning to match vulnerability data to assets
- Highlights and tracks critical vulnerabilities for easy management
- Tracks vulnerabilities on a per-device basis with granular control
- Sends emails to users with one-click-fixes for easy patching, reducing workloads
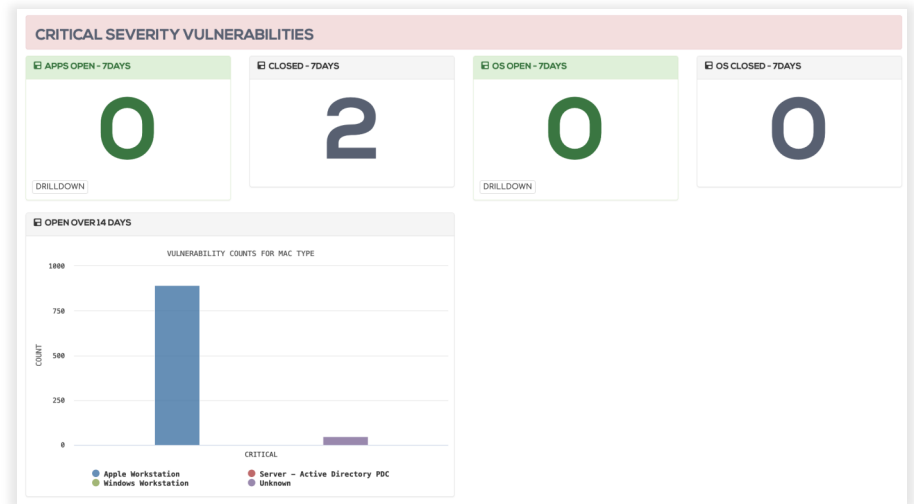

What are the benefits

- **Less repeats and false positives**—if you decide a vulnerability doesn't apply for whatever reason, they you can ignore it and it won't show up on the next cycle, since Rebasoft tracks vulnerabilities on a per device basis. This reduces workloads

- **No aggregated data**—we provide it fresh

- **True integration**—asset data, configuration data and vulnerability data, everything you need, all in one place, all tracked in real-time. You can easily drill-down through an asset to find what you need, when you need it without jumping between a dozen programs. This saves your IT team a lot of precious time

- **Fewer missed vulnerabilities**—since it's built off a solid asset foundation

How we provide value

Rebasoft discovers, assesses and tracks security compliance all from one platform.

- **A single deployment** collecting and consolidating information means you do not need humans to manually collate and report on data

- **Integration into asset management** means you do not need to spend hours tracking down systems that need security remediation

- **Lightweight**—collecting information effectively and automatically reduces the load on managed IT systems

- **Fewer systems and automation** helps reduce complexity and workload on busy IT teams

- **Automation** helps eliminate manual tasks and reduces human error

But that's just the start

Using the asset discovery system as a base, Rebasoft provides the functionalities of multiple cyber security programs like:

- Asset management
- Secure configuration
- Vulnerability management

So with Rebasoft. you can cover the same ground with less solutions. So, you can save money and reduce complexity, because it's all seamlessly integrated.

About us

We at Rebasoft are committed to delivering a robust cyber security solution that addresses genuine business needs. We are not interested in a "silver bullet" approach. We believe that multiple functionalities from one platform and real-time data are essential for keeping up with today's cyber threat landscape. We believe this approach is the future of cyber security and we aim to be the pioneers. We are proudly a UK based company. Visit us at www.rebasoft.net
